Subject: Application for AI/ML Trainee

Dear Hiring Team,

I am excited to apply for the Software Engineering Trainee (AI/ML) position at your innovative company. With a solid foundation in Python, data structures, and AI/ML frameworks like TensorFlow and Scikit-learn, I am eager to contribute to impactful projects while growing alongside experienced engineers.

During my academic journey and personal projects, I've worked on model development, data preprocessing, and algorithm implementation—building solutions such as [e.g., a disease prediction model or chatbot, if you'd like to mention]. I enjoy working in collaborative, agile environments and am keen to stay updated with the latest advancements in AI and ML.

Your company's forward-thinking approach and focus on real-world impact strongly resonate with me. I'm enthusiastic about the opportunity to learn, contribute, and bring value to your team.

Thank you for considering my application. I look forward to the opportunity to connect further.

Best regards,

V L Aditya Varma
