PROJECTS

- **Generative-AI-Using-LLMS**(<https://github.com/Madhavank1234/GenAI-Using-LLms>)
A unified platform offering Ask AI, Image Generator, and Recipe Generator features. Built with Spring AI, React, and the Spring Framework, it leverages Azure AI and Azure Cloud for scalability and intelligence. Users can get instant answers, create custom visuals, and generate tailored recipes with ease. Seamless API integration ensures an efficient and user-friendly experience.
- **Plant-Disease Prediction**(<https://github.com/Madhavank1234/PlantdiseasePrediction>)
This project successfully developed a CNN model for plant disease prediction, achieving a 95 percent accuracy using the New Plant Diseases Dataset with over 50,000 leaf images. The model effectively identifies a range of plant diseases, offering a scalable solution for early detection and management. The methodology, including data preprocessing, CNN architecture, and training, ensured high performance while addressing challenges like overfitting.
